Subject: Natural gas heating

External Email

Guys, I just read that there is a proposed change to the code that would not allow new installations of natural gas furnaces or heating. Please DO NOT make this change. Natural gas is, by far, the most efficient means for heating homes. It's also the best fuel and heat output for cooking food on a stove top. Please stop all of this climate alarmism. Please stop manipulating free markets. If some people really want heat pumps, let them have them. But most people want natural gas. It's extremely clean, inexpensive and the most efficient source of heat.

Thanks for your time.
